NCCN Guidelines Panel: Neuroendocrine and Adrenal Tumors

On behalf of the Society of Interventional Oncology, we respectfully request the NCCN Neuroendocrine and Adrenal Tumors guideline panel review the enclosed recommendations:

**Specific change 1:** NET-10: In NET-7, guidelines state for localized disease, “if surgery contraindicated, thermal ablation or SBRT.” However, in NET-10, for unresectable low grade or intermediate grade there is no mention of thermal ablation as an option. Thermal ablation should be added as an option for consistency with NET-7.

**Specific change 2:** Pheo-2: Under distant metastases, please include liver directed therapy for liver dominant disease with reference to principles of liver directed therapy.

Thank you for your consideration,

Etay Ziv, MD, PhD  
Nicholas Fidelman, MD
